

Steel Earthquake-Resistant, Reinforced Flexible Joint

Repair Sleeve

This can absorb expansion, contraction, eccentricity, bending, and torsion even after installation

This can be custom-made to fit the conditions and shape of existing pipelines.

Use

Applicable to all diameters and types of pipes, the pipe can be repaired or reinforced without cutting off the water supply by attaching a halved sleeve at the targeted pipe location. Installation is possible even if the existing pipe is slightly deformed.

Installation Process

Pre-measurement

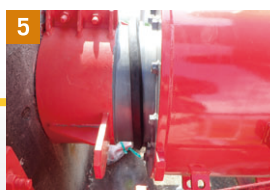

Surface preparation & painting

Installation

Temporary assembly

Rubber ring installed

Assembly
